

MANUAL SPRAYER

This is a small handheld manual sprayer used for applying liquids, such as pesticides, herbicides, fertilizers, or water, to plants or surfaces. It operates without the need for electric power or an engine, relying instead on human effort to generate pressure. Manual sprayers are commonly used in gardening, agriculture, and small-scale applications due to their simplicity, affordability, and ease of use.

USAGE OF MACHINE

Agriculture

Green House

General Cleaning

Big Home Garden

FEATURES

2 LITRE CAPACITY:

With a generous 2-litre tank, this sprayer allows you to cover a larger area without frequent refills, making your spraying tasks more efficient.

MANUAL OPERATION:

The manual operation ensures you have complete control over the spraying process. Simply pump the handle to build pressure and release the liquid through the nozzle, allowing for precise application.

DURABLE PP MATERIAL:

Constructed from high-quality polypropylene (PP), this sprayer is built to last. The material is resistant to chemicals and corrosion, ensuring long-term durability and reliability.
